Iskra manufactures and supplies a wide range of power electronic capacitors which can be used for various functions in electric circuits. They are most commonly used in frequency or voltage inverters, uninterruptible power supplies, motor drives, welding equipment, wind and solar power systems.

A typical switching-mode power supply is shown in the block diagram above.

DC link capacitors at position **C1** are used for DC voltage smoothing. Capacitors at position **C2** are snubber capacitors. When a switch opens, they eliminate voltage spikes caused by circuit inductance. AC filtering capacitors at position **C3** are used in input/output low-pass IC filters.

The AC/DC general purpose capacitors may be used in AC or DC applications.

# Terms and definitions

2

## **C<sub>N</sub> — rated capacitance**

Nominal value of capacitance measured at 20 °C.

## **U<sub>NDC</sub> — rated DC voltage**

Maximum operating peak voltage of either polarity but of a non-reversing type waveform for which the capacitor has been designed.

## **U<sub>rms</sub> — rated RMS voltage**

Root mean square of max. permissible value of sinusoidal AC voltage in continuous operation.

## **U<sub>N</sub> — rated AC voltage**

Maximum operating peak recurrent voltage of either polarity of a reversing type waveform for which the capacitor has been designed.

## **U<sub>r</sub> — ripple voltage**

Peak-to-peak alternating component of the unidirectional voltage.

## **I<sub>max</sub> — maximum current**

Maximum RMS current for continuous operation.

## **(dU/dt)<sub>max</sub> — maximum rate of voltage rise**

Maximum permissible repetitive rate of voltage rise of the operational voltage.

## **i — maximum peak current**

Maximum repetitive peak current that can occur during continuous operation.

$$\hat{i} = C \times (du/dt)_{\max}$$

## **\hat{i}\_s — maximum surge current**

Peak non-repetitive current induced by switching or any other disturbance of the system which is allowed for a limited number of times, for durations shorter than the basic period.

$$\hat{i}_s = C \times (du/dt)_s$$

## **Tan(δ) — tangent of the loss angle of a capacitor**

Ratio between equivalent series resistance and the capacitive reactance of a capacitor at a specified sinusoidal alternating voltage, frequency and temperature.

$$\begin{aligned} \text{Tan}(δ) &= \text{ESR} \times \omega \times C = \tan(\delta_0) + R_s \times \omega \times C \\ \text{Tan}(\delta_0) &= \text{dielectric loss factor} \end{aligned}$$

## **R<sub>s</sub> — series resistance**

Effective ohmic resistance of the conductor of a capacitor under specified operating conditions.

## **ESR — equivalent series resistance of a capacitor**

Effective resistance which, if connected in series with an ideal capacitor of capacitance value equal to that of the capacitor in question, would have a power loss equal to active power dissipated in that capacitor under specified operating conditions.

$$\text{ESR} = \tan(\delta_0) / (\omega \times C) + R_s$$

## **P<sub>diss</sub> — dissipated power**

Active power dissipated in the capacitor.

$$P_{\text{diss}} = I^2_{\max} \times \text{ESR}$$

## **L<sub>s</sub> — self-inductance**

The sum of all inductive elements which are contained in a capacitor.

## **θ<sub>amb</sub> — ambient temperature**

Temperature measured from the distance of approximately 0.1 m and at two-thirds of the height of the capacitor.

## **θ<sub>min</sub> — lowest operating temperature**

Lowest temperature of the dielectric at which the capacitor may be energized.

## **θ<sub>max</sub> — maximum operating temperature**

Highest temperature of the case at which the capacitor may be operated.

## **Δθ<sub>case</sub> — container temperature rise**

Difference between the temperature of the hottest point of the container and the temperature of the cooling air.

## **R<sub>th</sub> — thermal resistance**

Thermal resistance indicates how many degrees the temperature of the capacitor rises at the hot spot in relation to the dissipation losses.

## **θ<sub>hs</sub> — hot-spot temperature**

Temperature at the hottest spot inside the capacitor.

$$\theta_{\text{hs}} = \theta_{\text{amb}} + P_{\text{diss}} \times R_{\text{th}}$$

## **P<sub>max</sub> — maximum power loss**

Maximum permissible power dissipation for continuous operation.

$$P_{\text{max}} = (\theta_{\text{hs}} - \theta_{\text{amb}}) / R_{\text{th}}$$

# DC LINK CAPACITORS

## Type KNG2047 – KNG3047, KNG2048 – KNG3048

### Applications

3

- Hybrid vehicles wind plants
- Electric energy generation from sea waves
- Medical equipment
- Industrial equipment
- Car electronics
- Railways and turbines (generator)
- Frequency inverters
- Elevators
- Welders

### Features

- Used in DC-link circuits, can replace electrolytic capacitor
- Low ESR, high ripple current handling capabilities
- Low ESL
- Self-healing properties
- Long lifetime

### Standards

IEC 61071

UL 810 (construction only)  
File No.: E196169

### Specifications

Capacitance range	75 µF up to 1740 µF
Capacitance tolerance	± 10 %, on request ± 5 %
Rated voltage U <sub>ND</sub> C	600 V DC up to 2200 V DC
Dielectric loss factor tan(δ <sub>0</sub> )	< 2 × 10 <sup>-4</sup> at 1kHz
Test voltage (between terminals)	1.5 × U <sub>ND</sub> C, 10 s
Test voltage (terminals to case)	3600 V, 50 Hz, 2 s
Temperature coefficient	-2.3 % from -20 °C to +70 °C
Operating temperature	-40 °C to 85 °C
Inductance	< 70 nH
Max. altitude	4000 m
Max. hot spot temperature	85 °C
Climatic category	40/85/56 according to IEC 68/1
Lifetime expectancy	100.000 hours at U <sub>ND</sub> C, θ <sub>hs</sub> = 70 °C
Failure rate	100 FIT

Other values and dimensions available upon request.

## Dimensions

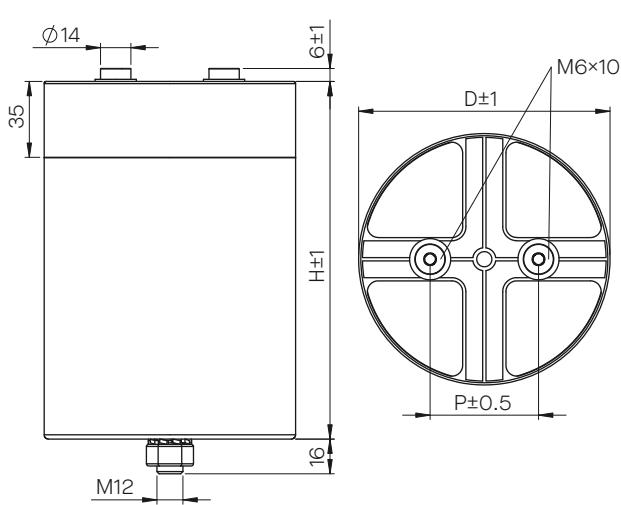

**KNG2047, KNG3047 – D 85 mm**

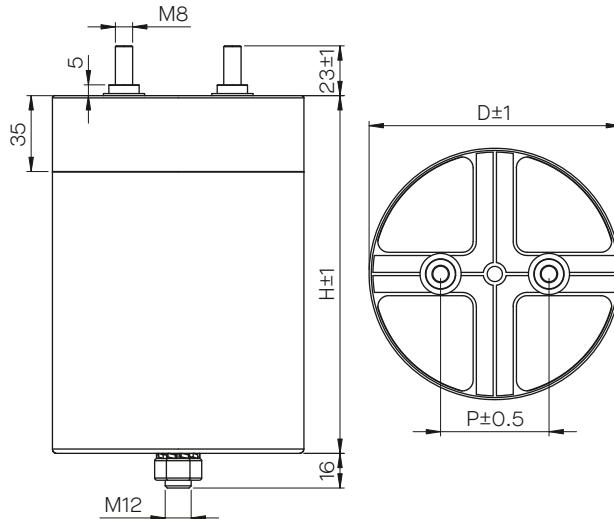

**KNG2048, KNG3048 – D 85 mm**

**KNG2047, KNG3047 – D 116 mm**

**KNG2048, KNG3048 – D 116 mm**

## Construction

**Dielectric:** polypropylene film

**Capacitor electrodes:** vacuum-deposited metal layers (without overpressure device)

**Casing:** cylindrical aluminium case with plastic self-extinguishing sealing cover (UL 94 V-0)

**Filling:** epoxy resin dry (UL94 V-0)

**Terminals:** M6×10 internal threads (types KNG2047, KNG3047) - max. torque 5 Nm

M8 screw (types KNG2048, KNG3048) - max. torque 6 Nm

**Base stud:** M12×16 - max. torque 12 Nm

# HIGH POWER DC LINK CAPACITORS

## Type KNG4910, KNG4914

### Applications

- ▶ Switching mode power supplies (SMPS)
- ▶ Wind plants
- ▶ Solar power plants
- ▶ Motor drives
- ▶ Induction heaters
- ▶ Frequency inverters
- ▶ Uninterruptible power supplies (UPS)

### Features

- ▶ For harsh environment
- ▶ Self-healing properties
- ▶ High ripple current
- ▶ High reliability
- ▶ Very low losses

### Standards

IEC 61071

AEC-Q200 (on request)

#### Specifications

Rated capacitance	0.22 µF up to 100 µF
Capacitance tolerance	±5 %, ±10 %
Rated voltage U <sub>NDC</sub>	250 V DC, 300 V DC, 450 V DC, 630 V DC, 750 V DC, 875 V DC
Test voltage (between terminals)	1.5 × U <sub>NDC</sub> , 10 s
Self-inductance	< 1 nH per mm of pitch
Insulation resistance between terminals	R × C ≥ 30 000 s after 1 min at 100 V for U <sub>NDC</sub> < 500 V DC at 500 V for U <sub>NDC</sub> ≥ 500 V DC
Operating temperature range	-40 °C to +110 °C
Max. hot spot temperature	+110 °C
Climatic category	40/110/56 according to IEC 60068-1
Life expectancy	≥ 100.000 hours at U <sub>NDC</sub> , θ <sub>hs</sub> = 70 °C
Failure rate	100 FIT

## Construction

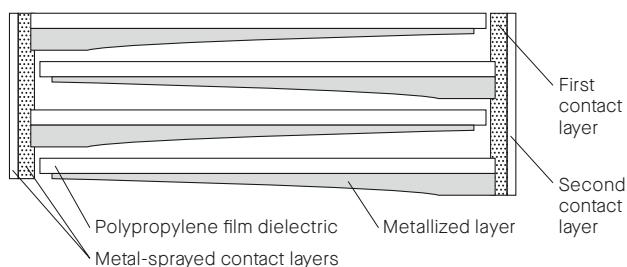

**Dielectric:** polypropylene film

**Capacitor electrodes:** vacuum-deposited metal layers

**Casing:** plastic case with flame-retardant epoxy resin sealing (UL 94 V-0)

**Terminals:** parallel tinned copper wire (2 or 4 pins)

## Internal construction

# HIGH DENSITY DC LINK CAPACITORS

## Type KNG1910, KNG1914

### Applications

- Hybrid vehicles
- Wind plants
- Solar power plants
- Electric energy generation from sea waves
- Medical equipment
- Industrial equipment
- Car electronics
- Railways and turbines (generator)
- Frequency inverters
- DC filtering applications

### Features

- High capacitance
- Self-healing properties
- High reliability
- Low losses
- Low dissipation factor of dielectric

### Standards

IEC 61071

AEC-Q200 (on request)

#### Specifications

Rated capacitance	0.1 mF up to 480 mF
Capacitance tolerance	±5 %, ±10 %
Rated voltage	450 V DC, 700 V DC, 800 V DC, 900 V DC, 1100 V DC, 1300 V DC
Test voltage (between terminals)	1.5×U, 10 s
Self-inductance	< 1nH per mm of pitch
Insulation resistance between terminals	RxC ≥ 30 000 s after 1 min at 100 V for U <sub>NDC</sub> < 500 V DC at 500 V for U <sub>NDC</sub> ≥ 500 V DC
Max. peak-to-peak voltage	0.2×U <sub>NDC</sub>
Operating temperature range	-40 °C to +85 °C
Max. hot spot temperature	105 °C
Climatic category	40/85/56 according to IEC 60068-1
Life expectancy	≥ 100 000 hours at U <sub>NDC</sub> , θ <sub>hs</sub> = 70 °C
Failure rate	100 FIT

### Construction

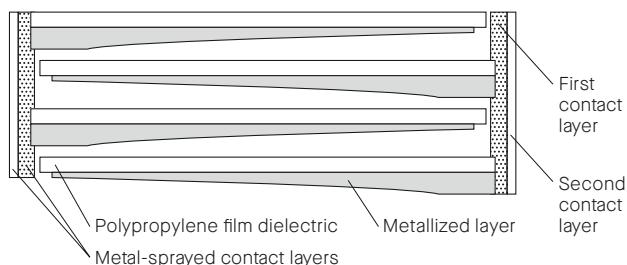

**Dielectric:** polypropylene film

**Capacitor electrodes:** vacuum-deposited metal layers

**Casing:** plastic case with flame-retardant epoxy resin sealing (UL 94 V-0)

**Terminals:** parallel tinned copper wire (2, 4 or 12 pins)

### Internal construction

### Cautions and warnings

**MECHANICAL OVERLOADS:** The capacitor is designed for mounting on a PC board. Do not move the capacitor, after it has been soldered to the PC board. The capacitor should not be mounted on places where vibrations or accelerations occur. Do not exceed the tested ability to withstand vibration. Avoid any compressive, tensile or flexural stress. **Note:** Movement of the capacitor within the case can cause low insulation resistance, shorts, failure on terminals and the capacitor case.

**OVERLOADS:** Do not overload the capacitor. Avoid overloading the capacitor and consider the flammability of materials.

**IMPULSES:** If electric energy impulses are higher, dielectric will break down. Avoid external electric energy impulse. The peak voltage ( $U_p$ , AC) should not be higher than the rated DC voltage ( $U_{NDc}$ ).

**ENVIRONMENTAL CONDITIONS:** Do not exceed operating temperature. Do not expose the capacitor to humidity longer than it is recommended. Do not expose the capacitor to increased temperature more than it is recommended. The dissipation factor may go up and down with increased temperature. Avoid external fire or electricity.

# DC LINK CAPACITORS

## Type DC link EV – customized products

### Applications

- ▶ Energy conversion
- ▶ AC motor drives
- ▶ Hybrid/electric vehicles
- ▶ Inverter modules

### Features

- ▶ Metallized self-healing polypropylene
- ▶ Low ESR (high ripple current)
- ▶ Low ESL
- ▶ Long lifetime

### Standards

**IEC 61071**

### Specifications

#### Electrical characteristics

Rated capacitance	500 µF, ± 10 %
Rated DC voltage	450 V DC
Peak voltage	675 V AC
Nom. RMS current	85 A <sub>rms</sub>
Max. RMS current	120 A <sub>rms</sub>
Max. peak current	2500 A
Equivalent series resistance @ 1 kHz	< 1 mΩ
Equivalent series inductance	15 nH
Max. pulse rise time	4 V/µs

#### Thermal characteristics

Min. Operating temperature	-40 °C
Max. Operating temperature	+110 °C
Storage temperature	-40 °C to +85 °C

#### Test methods & performances

Voltage test (between terminals)	675 V, 10 s
Voltage test (terminals to case)	2500 V, 50 Hz, 2 s

#### Life expectancy

Life expectancy @ U <sub>NDC</sub>	15 000 hours (hotspot max. T = 90 °C)
Reliability	300 FIT

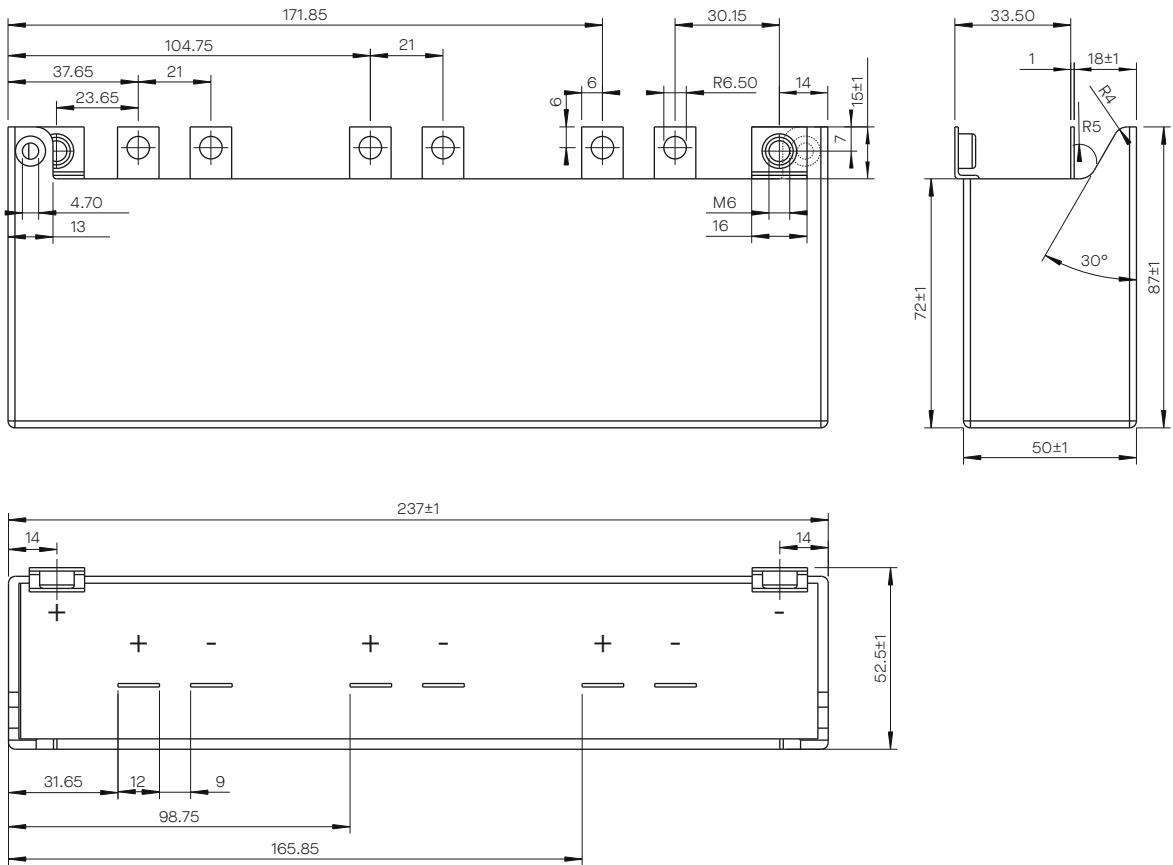

#### Construction

Dielectric	Metallized polypropylene
Winding	Non-inductive
Filling	Polyurethane resin
Case constructions	PBT (metallic for prototype)
Terminals	Flat copper

#### Dimensions

Width	72 mm
Height	50 mm
Length	237 mm
App. weight	< 1.5 kg

## Dimensions

## Notes:

For more information about the construction, please contact Iskra.

Iskra technical department is ready to support customers in developing capacitors on their requests and specifications.

# DC LINK CAPACITORS

## KNA96D6 480µF 10% 600VDC

### Applications

- Energy conversion
- AC motor drives
- Hybrid/electric vehicles
- Inverter modules

### Features

- Metallized self-healing polypropylene
- Low ESR (high ripple current)
- Low ESL
- Long lifetime

### Standards

**IEC 61071**

### Specifications

#### Electrical characteristics

Rated capacitance ( $C_N$ )	480 µF
Capacitance tolerance	±10 % (code K)
Rated voltage ( $U_{NDC}$ )	600 VDC at 85 °C
Non-recurrent surge voltage ( $U_S$ )	780 VDC
Test voltage between terminals	1.5 · $U_{NDC}$ , 10 s
Equivalent series resistance (ESR)	1.2 mΩ at 10 kHz
Max. RMS current ( $I_{max}$ )	160 A, $T_{amb} = 70$ °C
Max. pulse loading ( $dU/dt$ )	5 V/µs
Max. peak current ( $i$ )	2400 A
Max. peak-to-peak voltage ( $U_{p-p}$ )	0.2 · $U_{NDC}$
Insulation resistance ( $R_i$ )	$R_i \cdot C_N \leq 10\,000$ s at 500 V, 60 s
Self inductance ( $L_s$ )	< 20 nH
Climatic category	40/085/56 acc. to IEC 60068-1
Operating temperature ( $T_{min}$ to $T_{max}$ )	-40 °C to 105 °C
Max. hot spot temperature ( $T_{hs, max}$ )	105 °C

#### Life expectancy

Lifetime expectancy	> 100 000 h at $U_{NDC}$ , $T_{hs} = 70$ °C
Failure rate	< 300 FIT acc. to IEC 61709

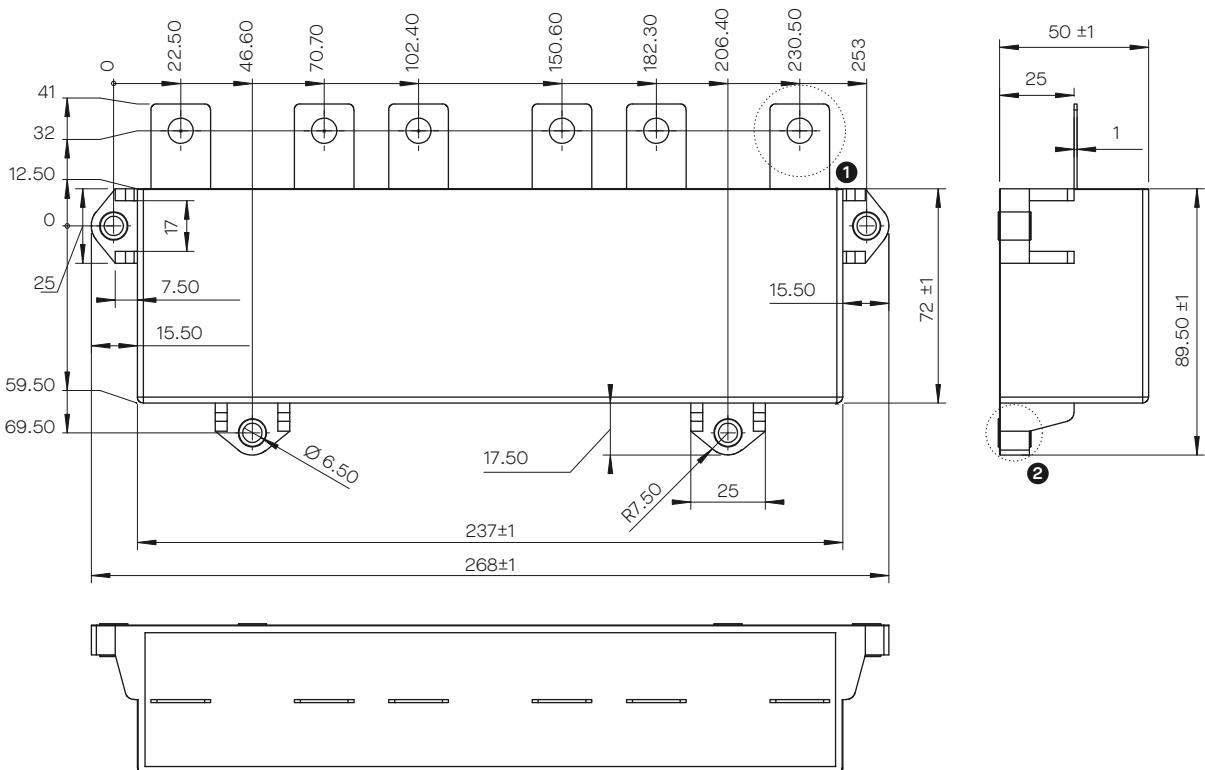

#### Materials

Dielectric	Self-healing metallized polypropylene
Case	Flame-retardant plastic case (UL 94 V-0)
Case cover	Flame-retardant resin (UL 94 V-0)
Terminals	Tinned copper lugs for screw fixing M8

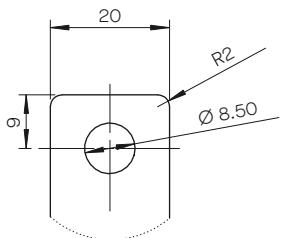

#### Dimensions

Width	72 mm ±1
Height	50 mm ±1
Length	237 mm ±1

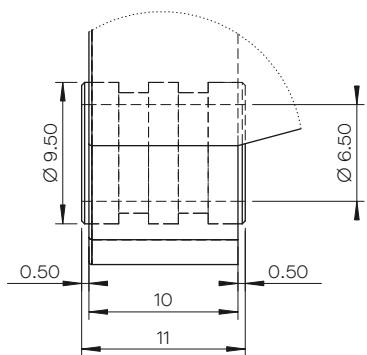

## Dimensions

**Detail ① (1.25:1)**  
6× terminals

**Detail ② (2:1)**  
4× fixing holes

### Notes:

For more information about the construction, please contact Iskra.

Iskra technical department is ready to support customers in developing capacitors on their requests and specifications.

# DC LINK CAPACITORS

## KNA96D6 1000µF 10% 800VDC

### Applications

- Energy conversion
- AC motor drives
- Hybrid/electric vehicles
- Inverter modules

### Features

- Metallized self-healing polypropylene
- Low ESR (high ripple current)
- Low ESL
- Long lifetime

### Standards

**IEC 61071**

### Specifications

#### Electrical characteristics

Rated capacitance ( $C_N$ )	1000 µF
Capacitance tolerance	±10 % (code K)
Rated voltage ( $U_{NDC}$ )	800 VDC at 85 °C
Non-recurrent surge voltage ( $U_s$ )	1040 VDC
Test voltage between terminals	1.5 · $U_{NDC}$ , 10 s
Equivalent series resistance (ESR)	< 1.2 mΩ at 10 kHz
Max. RMS current ( $I_{max}$ )	160 A, $T_{amb} = 70$ °C
Max. pulse loading (dU/dt)	5 V/µs
Max. peak current ( $i$ )	4500 A
Max. peak-to-peak voltage ( $U_{p-p}$ )	0.2 · $U_{NDC}$

## KNG2247 750µF 1100VDC

### Applications

- Energy conversion
- AC motor drives
- Hybrid/electric vehicles
- Inverter modules

### Features

- Metallized self-healing polypropylene
- Low ESR (high ripple current)
- Low ESL
- Long lifetime

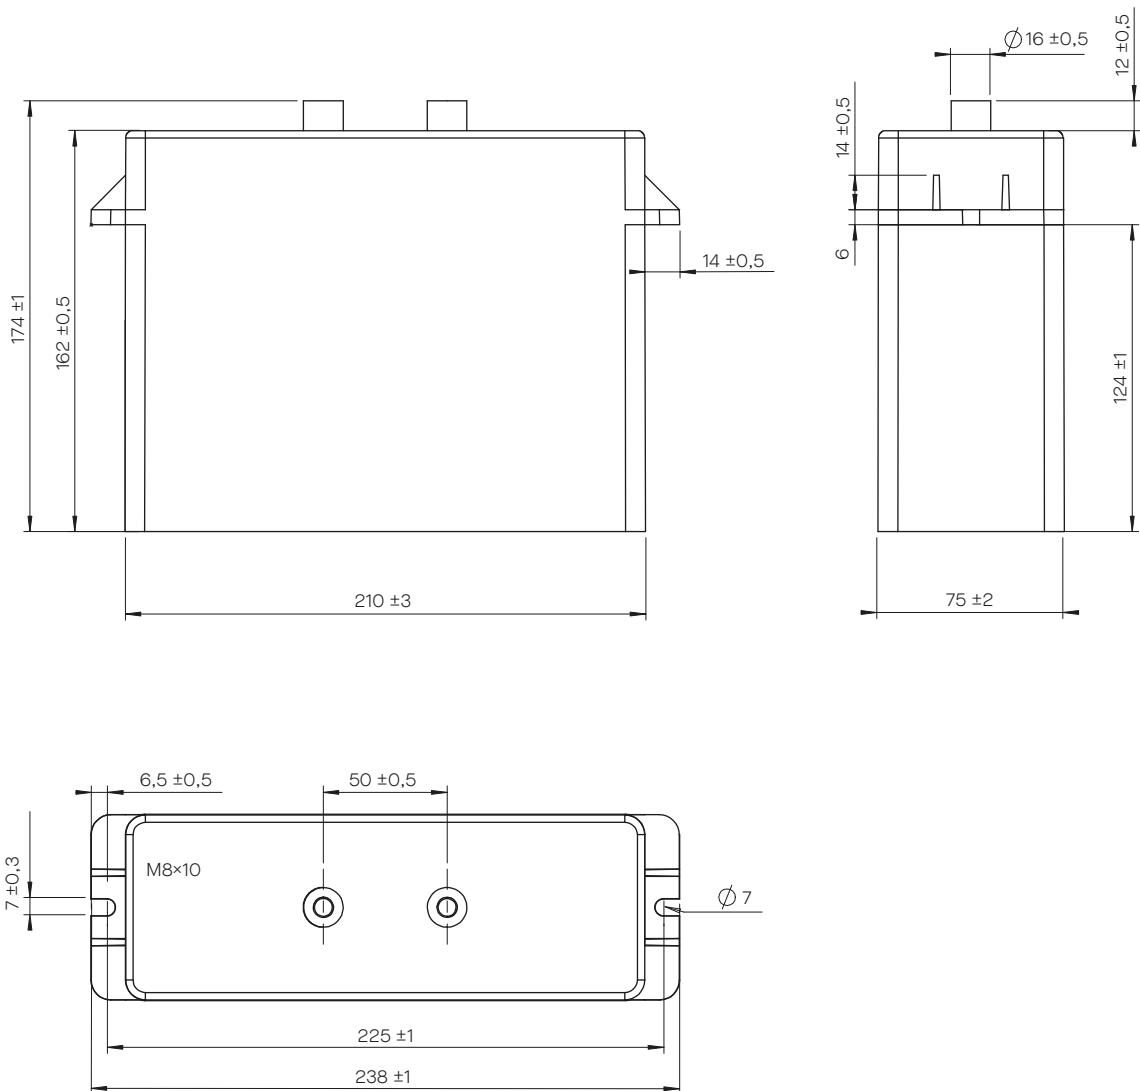

### Standards

IEC 61071

#### Specifications

Electrical characteristics	
Rated capacitance ( $C_n$ )	750 $\mu$ F
Capacitance tolerance	$\pm 5 \%$
Rated DC voltage	1100 V
Max. current ( $I_{max}$ )	145 A
Max. du/dt	14 V/us
Max. peak current ( $I_p$ )	31.5 kA
Max. surge current ( $I_s$ )	10.5 kA
Tangent of the loss angle ( $\tan(\delta_0)$ )	$2 \times 10^{-4}$
Equivalent series inductance (ESL)	45 nH
Equivalent series resistance (ESR)	0.4 mOhm @ 1 kHz
Operating temperature ( $T_{min}$ to $T_{max}$ )	-40 °C to 70 °C
Storage temperature ( $T_{storage}$ )	-40 °C to 85 °C
Max. hot spot temperature ( $T_{hs}$ )	70 °C
Thermal resistance ( $R_{th}$ )	1.8 °C/W
Altitude	Up to 4000 m
Test methods and performances	
Terminal to terminal ( $U_{BB}$ )	1650 V, 10 s
Terminal to case ( $U_{BC}$ )	N/A
Mechanical parameters	
Length (L)	210 mm
Width (W)	75 mm
Height (H)	162 mm
Protection	IP00
Weight	3.7 kg
Clearance distance	34 mm
Creepage distance	34 mm
Safety device	No internal protection device
Terminals	Male M8x14 (Maximal torque 12 Nm)
Material parameters	
Dielectric	Self healing
Filling	Dry resin, UL 94, VO
Case	Plastic, UL 94, VO

# SNUBBER CAPACITORS

## Type KNO19Ax, KNO19Bx, KNO1919, KNO1914

### Applications

Snubber capacitors are used in applications with high pulse loadings and high frequencies. The purpose of snubber capacitors is to eliminate voltage spikes which are caused by semiconductors or other devices.

- ▶ IGBT (insulated gate bipolar transistor) module
- ▶ AC and DC converter and inverter (electric drives)
- ▶ Uninterruptible power system (UPS)
- ▶ Power supply

### Features

- ▶ High voltage
- ▶ High pulse load capability
- ▶ Self-healing properties
- ▶ High reliability
- ▶ Low self-inductance
- ▶ Low dissipation factor of dielectric
- ▶ Terminal options for direct mount or board
- ▶ High insulation resistance

### Standards

IEC 61071

AEC-Q200 (on request)

### Specifications

Rated capacitance	0.047 μF up to 8 μF
Capacitance tolerance	± 5 %, ± 10 %
Rated voltage	630 V DC, 850 V DC, 1200 V DC, 1600 V DC, 2000 V DC, 2500 V DC, 3000 V DC
Operating temperature range	-40 °C to +85 °C
Max. hot spot temperature	105 °C
Climatic category	40/85/56 according to IEC 60068-1
Dissipation factors at 1 kHz	$\text{tg}\delta \leq 5 \times 10^{-4}$
Test voltage terminal to terminal	$1.5 \times U_{\text{NDC}}$ , 10 s
Peak non-repetitive max. current	$I \times 1.5$
Life expectancy	≥ 100 000 hours at $U_{\text{NDC}}, \theta_{hs} = 70^\circ\text{C}$
Failure rate	100 FIT

	57.5	50.5	±0.4	20.3	±0.5	1.2	±0.05

## Construction

**Dielectric:** polypropylene film

**Capacitor electrodes:** vacuum-deposited metal layers

**Casing:** plastic case with flame-retardant epoxy resin sealing (UL 94 V-0)

**Terminals:** tinned lugs from brass or parallel tinned copper wire (2 or 4 pins)

## Cautions and warnings

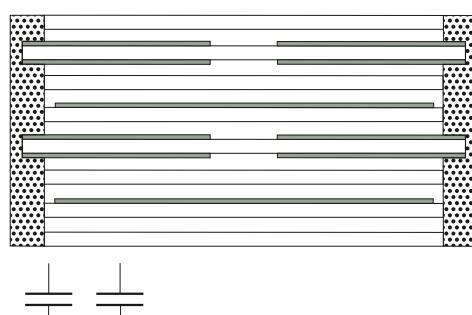

**MECHANICAL OVERLOADS:** The capacitor is designed for mounting on a PC board. Do not move the capacitor, after it has been soldered to the PC board. The capacitor should not be mounted on places where vibrations or accelerations occur. Do not exceed the tested ability to withstand vibration. Avoid any compressive, tensile or flexural stress. When fixing the lugs the screw torque is to be limited to max. 10 Nm.

**OVERLOADS:** Do not overload the capacitor. Avoid overloading the capacitor and consider the flammability of materials.

**IMPULSES:** If electric energy impulses are higher, dielectric will break down. Avoid external electric energy impulse. The peak voltage ( $U_p$ , AC) should not be higher than the rated DC voltage ( $U_{NDC}$ ).

**ENVIRONMENTAL CONDITIONS:** Do not exceed operating temperature. Do not expose the capacitor to humidity longer than it is recommended. Do not expose the capacitor to increased temperature more than it is recommended. The dissipation factor may go up and down with increased temperature. Avoid external fire or electricity.

## Internal construction

DOUBLE SIDED METALLIZED PLASTIC FILM WITH INTERNAL SERIES CONNECTION AND METALLIZED PLASTIC FILM

# AC/DC GENERAL PURPOSE CAPACITORS

## Type KNI5048

### Applications

Metalized polypropylene ac and dc capacitors are used for power electronic applications with high current and harmonics distortion with long life expectancy.

- Inverter
- Filtering
- Switching

### Features

- AC/DC voltage
- Self-healing properties
- High reliability
- Cylindrical aluminium case with plastic self-extinguishing sealing cover
- Overpressure disconnector
- Tinned brass screw

### Standards

IEC 61071

UL-CSA approved (file No. E163120)

### Specifications

Rated capacitance	10 μF up to 600 μF
Capacitance tolerance	± 5 %, ± 10 %
Rated voltage (U <sub>rms</sub> )	250 V AC, 330 V AC, 480 V AC, 690 V AC
Operating temperature range	-40 °C to +85 °C
Climatic category	40/070/56 according to IEC 60068-1
Dissipation factors	tgδ ≤ 10 × 10 <sup>-4</sup> at 100 Hz
Test voltage (between terminals)	1.5 × U <sub>n</sub> , 10 s
Test voltage (terminals to case)	3 kV, 50 Hz, 2 s
Life expectancy	≥ 100 000 hours at U <sub>rms</sub> , θ <sub>hs</sub> = 70 °C
Failure rate	300 FIT

- Approvals in use

## Notes:

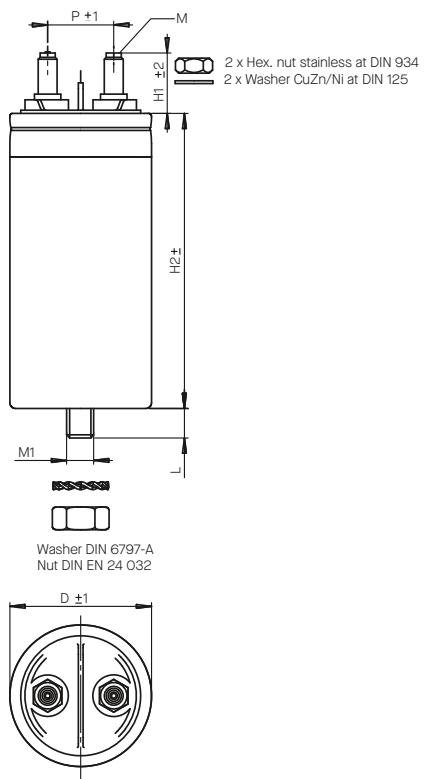

Other values and dimensions available on request.

## Dimensions

### KNI5048 D50 to D60 mm

### KNI5048 D75 to D85 mm

## Construction

**Dielectric:** polypropylene film

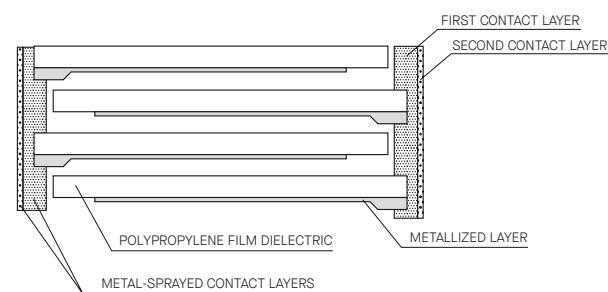

**Capacitor electrodes:** vacuum-deposited metal layers (overpressure disconnector)

**Casing:** cylindrical aluminium case with plastic self-extinguishing sealing cover (UL94 V-0)

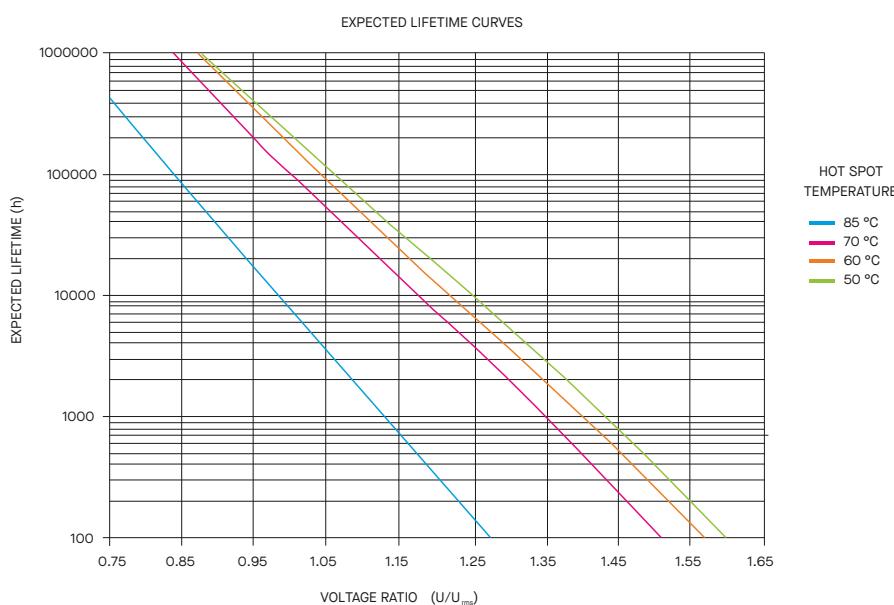

**Filling:** biodegradable vegetable oil (non PCB)

**Terminals:** tinned brass screw

## Internal construction

## Lifetime expectancy

Safe operation of the capacitors can be expected only if all electrical and thermal specifications as stated on the label, in the data sheets or catalogues and the following instructions are strictly observed. The manufacturer does not accept responsibility for any damage that could arise due to non-observance.

## Connection

Use the appropriate tab connectors to connect the cables of the capacitors. Do not solder leads to the terminals.  
 Do not bend or turn or move in any other way the connecting terminals and the tab connectors.  
 Do not use heavy or sharp objects and tools on the bordering or the connecting terminals.  
 Connection at threaded studs should be made between two nuts. During the connection the lower nut should be backed up to avoid any transmission of the torque.  
 Permitted torque for screw connections:

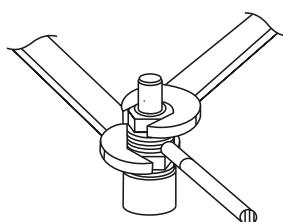

M4 - 2 Nm

### Warning: safe connection

M5 - 3 Nm

M6 - 5 Nm

M10 - 10 Nm

To prevent breaking at tightening always use two wrenches

## Mounting

Can be mounted in any position.

The capacitor has to be installed in such a way as to avoid any mechanical damage and dents in the aluminium.

Capacitors with overpressure safety device should be connected with sufficiently flexible leads in order to enable proper functioning of the mechanism. Above the terminals leave enough space for expansion of the capacitor case.

Leave a minimum distance of 15 mm of free space above each capacitor.

Connect these capacitors by using only flexible cables or elastic copper bands.

## Earthing

Capacitors with a metal case must be earthed at the mounting stud

Permitted torque for studs:

**M8 - 5 Nm**

**M12 - 12 Nm**

## Cautions and warnings

**ATTENTION:** In case of dents of more than 1 mm in depth or any other mechanical damage, capacitors must not be used at all. This also applies to cases of leakage. To ensure the full functionality of the overpressure disconnector, elastic elements must not be hindered and a minimum space of 15 mm has to be kept above each capacitor. Check tightness of the connections/terminals periodically. The energy is stored in capacitors may be lethal. To prevent any chance of shock, discharge and short circuit the capacitor before handling. Failure to follow cautions may result, in the worst case, in premature failures, bursting and fire. Iskra d.o.o. is not responsible for any damage caused to people or things and resulting from an improper installation or a misapplication of capacitors.

**SAFETY:** Electrical or mechanical misapplication of capacitors may be hazardous. Personal injury or property damage may result from bursting of the capacitor or from the expulsion of oil or melted material due to mechanical disruption of the capacitor. Ensure good, effective grounding for capacitor enclosures. Observe appropriate safety precautions during operation (self-recharging phenomena and high energy contained in the capacitor). Handle capacitors carefully, even after the disconnection they may still be charged. The terminals of capacitors, connected bus bars and cables as well as other devices may also be energized. Follow good engineering practice.

**THERMAL LOAD:** After installation of the capacitor it is necessary to verify that maximum hot spot temperature does not exceed during extreme service conditions.

**MECHANICAL PROTECTION:** The capacitor has to be installed in such a way as to avoid any mechanical damage and dents in the aluminium.

**STORAGE AND OPERATING CONDITIONS:** Do not use or store capacitors in corrosive atmosphere, especially where chloride gas, sulfide gas, acid, alkali, salt or the like are present. In dusty environments, it is required to perform regular maintenance and proper cleaning, especially of the terminals, to avoid conductive path between phases and/or phases and ground. The maximum storage temperature is 85 °C.

**OVERPRESSURE DISCONNECTOR:** To ensure full functionality of an overpressure disconnector, the following must be observed: the elastic elements must be hindered, i.e.: Connecting lines must be flexible leads (cables); there must be enough space for expansion above the connections; folding crimps must not be retained by clamps; stress parameters of the capacitor must follow IEC 61071 specification.

# AC FILTERING CAPACITORS (1-, 3-PHASE DELTA CONNECTION)

## Type KNI4051, KNI4053

### Applications

- Switching mode power supplies (SMPS)
- Solar power plants
- Wind plants
- Frequency inverters
- Uninterruptible power supplies (UPS)

### Features

- For harsh environment
- Self-healing properties
- Aluminium case; filled with vegetable oil, non-PCB
- Overpressure disconnector suitable for PFC and LCL filter
- High ripple current
- High reliability
- Very low losses

### Standards

IEC 61071

Optional IEC 60831, UL810

### Specifications

Rated capacitance	3×8 µF up to 3×200 µF
Capacitance tolerance	±5 %, ±10 %
Rated voltage (U <sub>rms</sub> )	450 V
Rated frequency	50/60 Hz
Dissipation factor (tan δ <sub>0</sub> )	2 × 10 <sup>-4</sup>
Insulation strength C x R <sub>i</sub>	> 5 000 s
Operating temperature range	-40 °C to +85 °C
Max. hot spot temperature	+85 °C
Storage temperature	-40 °C to +85 °C
Humidity class	C
Protection	IP20
Contacts	2×35 mm <sup>2</sup> , M6 (5 Nm), I <sub>max</sub> = 80 A 2×25 mm <sup>2</sup> , M5 (3 Nm), I <sub>max</sub> = 60 A 2×16 mm <sup>2</sup> , M4 (2 Nm), I <sub>max</sub> = 36 A
Discharge resistor	No
Test voltage (between terminals)	1.5 x U <sub>rms</sub> , 50 Hz, 10 s
Test voltage (terminals to case)	4000 V, 50 Hz, 2 s
Sealing test	75 °C, 6 h
Mounting position	Upwards
Internal protection	Overpressure disconnector (all phases)
Altitude	Up to 4000 m
Expected lifetime	≥ 100 000 hours at U <sub>rms</sub> , θ <sub>hs</sub> = 70 °C
Failure rate	100 FIT

# AC FILTERING CAPACITORS

## Type KNB1910, KNB1914

### Applications

- Input/output AC filters for power converters
- Switching mode power supplies (SPMS)
- Solar power plants
- Wind plants
- Motor drives
- Induction heaters
- Frequency inverters
- Uninterruptible power supplies (UPS)

### Features

- Self-healing properties
- High ripple current
- High reliability
- Low losses
- Small dimensions
- Designed for PCB mounting

### Standards

IEC 61071

AEC-Q200 (on request)

### Specifications

Rated capacitance	0.1 μF up to 80 μF
Capacitance tolerance	± 5 %, ± 10 %
Rated RMS voltag U <sub>rms</sub>	250 V AC, 300 V AC, 350 V AC, 400 V AC, 440 V AC
Test voltage (between terminals)	1.5 x U <sub>NDC</sub> , 10 s
Self-inductance	< 1 nH per mm of pitch
Insulation resistance between terminals	RxC ≥ 30 000 Ω after 1 min at 500 V
Operating temperature range	-40 °C to 85 °C
Max. hot spot temperature	105 °C
Climatic category	40/85/56 according to IEC 60068/1
Lifetime expectancy	≥ 60 000 hours at U <sub>rms</sub> , θ <sub>hs</sub> = 70 °C
Failure rate	100 FIT

37.5	±0.5	20.3	±0.5	1 or 1.2	±0.05	L + 0.5	H + 0.5	W + 0.5
52.5	±0.5	20.3	±0.5	1.2	±0.05	L + 1.0	H + 1.0	W + 1.0

## Construction

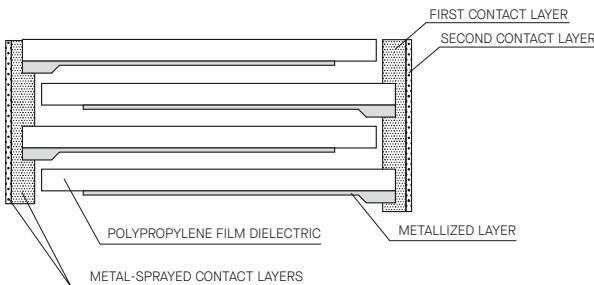

**Dielectric:** polypropylene film

**Capacitor electrodes:** vacuum-deposited metal layers

**Casing:** plastic case with flame-retardant epoxy resin sealing (UL 94 V-0)

**Terminals:** parallel tinned copper wire (2, 4 or 12 pins)

## Internal construction

**Note:** capacitors with rated RMS voltage 440 VAC have an internal serial connection.

## Cautions and warnings

**MECHANICAL OVERLOADS:** The capacitor is designed for mounting on a PC board. Do not move the capacitor, after it has been soldered to the PC board. The capacitor should not be mounted on places where vibrations or accelerations occur. Do not exceed the tested ability to withstand vibration. Avoid any compressive, tensile or flexural stress.

**OVERLOAD:** Do not overload the capacitor. Avoid overloading the capacitor and consider the flammability of materials.

**IMPULSES:** If electric energy impulses are higher, dielectric will break down. Avoid external electric energy impulse. The peak voltage (U<sub>p</sub>, AC) should not be higher than the rated DC voltage (U<sub>NDC</sub>).

**ENVIRONMENTAL CONDITIONS:** Do not exceed operating temperature. Do not expose the capacitor to humidity longer than it is recommended. Do not expose the capacitor to increased temperature more than it is recommended. The dissipation factor may go up and down with increased temperature. Avoid external fire or electricity.
