General technical data

ISKRA capacitors for use in electronics are made of dielectric materials as follow:

- polypropylene film
- polyester (polyethyleneterephthalate).

Survey of specific properties of individual dielectrics and use:

4

Polyester (polyethyleneterephthalate) film

Dielectric constant (25 °C/1 kHz):

$\epsilon_r = 3.25$; ASTM D 150-65T

Dielectric loss (25 °C/60 Hz):

$\tan\delta \leq 20.10^{-4}$ C;
ASTM D 150-65T

Dielectric strength (25 °C/60 Hz):

295 kV/mm; ASTM D 149-64,
ASTM D 2305-67

Temperature coefficient

of capacitance:

$TC \approx +500, 10^{-6}$ C/°C

Temperature range max.:

+ 125 °C

Water absorption (sink for 24 h):

0.8 % max.; ASTM D 570-63

Dielectric absorption:

0.2 to 0.8 %

Polyester capacitors are used mainly in electronic devices where special characteristics of electrical parameters are not required and where wider temperature range is required. Mainly they are used as conjunctive or block capacitors.

Polypropylene film

Dielectric constant (25 °C/1 kHz):

$\epsilon_r = 2.2$; ASTM D 150

Dielectric loss (25 °C/1 kHz):

$\tan\delta \leq 5.10^{-4}$ C; ASTM D 150

Dielectric strength (25 °C/1 kHz):

300 to 380 kV/mm; ASTM D 149

Temperature coefficient of

capacitance:

($-100 \leq TC \leq -300$), $10^{-6}/^{\circ}\text{C}$

Temperature range max.:

+ 100 °C

Water absorption:

< 0.05 %; ASTM D 202

Dielectric absorption:

0.03 %

Polypropylene capacitors are used mainly in electronic circuits, where following requirements appear:

- small dielectric losses
- high insulation resistance
- negative and defined temperature coefficient (temperature compensation at oscillating circles with ferrite coil)
- high pulse loading
- loading with AC voltage.

Designation of dielectric in type code of capacitors

Type code is composed by three letters and four figures:

K	X	X	Y	Y	Y	Y	Y
↓	↓	↓	↓	↓	↓	↓	↓
1	2	3	4	5	6	7	

1st Letter "K" means capacitor

2nd Letter tells the type of dielectric (special for metallized version)

3rd Letter tells the purpose of use

4th, 5th, 6th, 7th Figure describes construction and design of capacitor and leads

Survey of letter used for single kinds of dielectric:

E - metallized polyester film

L - polypropylene film

N - metallized polypropylene film

Electrical characteristics

1. Rated capacitance

Rated capacitance C_R values are available according to E-ranges. Available E-ranges (E6, E12, E24, E48, E96, on request E192) are stated at type descriptions in catalogue. The values from range E6 are privileged.

The E-ranges are put down in accordance to IEC-publ. 60063 and DIN 41426. Required values from E-range are all values from table below, multiplied by positive or negative whole number power exponent of the number 10.

E6 ± 20 %	E12 ± 10 %	E24 ± 5 %	E48 ± 2 %	E96 ± 1 %	E192 ± 0.5 %	E6 ± 20 %	E12 ± 10 %	E24 ± 5 %	E48 ± 2 %	E96 ± 1 %	E192 ± 0.5 %

2. Tolerance of rated capacitance

Standard tolerances and belonging codes for marking tolerances of rated capacitances are as follow:

Tolerance %	± 20	± 10	± 5%	(± 2.5)	± 2	(± 1.25)	± 1	± 0.5
Code	M	K	J	(H)	G	(E)	F	D

The narrowest possible tolerance is ± 1 pF (Z).

Available tolerances of rated capacitances are stated at type descriptions in catalogue.

3. Temperature dependence of capacitance

Temperature coefficient TC is defined for temperature range $\vartheta_1 \dots \vartheta_2$ according to DIN 41380 as follows:

$$TC = \frac{C_2 - C_1}{C_3 (\vartheta_2 - \vartheta_1)}$$

C_1 - capacitance at temperature ϑ_1

C_2 - capacitance at temperature ϑ_2

C_3 - capacitance at temperature $(25 \pm 10)^\circ\text{C}$

Temperature coefficient for single type of capacitors is given in $10^{-6}/^\circ\text{C}$.

4. Rated voltage UR

The rated voltage UR is the maximum direct voltage which may be applied continuously to the terminals of a capacitor at any temperature between the lower category temperature and the rated temperature.

5. Category voltage UC

Category voltage UC is the maximum direct voltage which may be applied to the terminals of a capacitor at its upper category temperature. Adequate reducing of voltage for temperature range between upper rated temperature and category temperature is given at single types of capacitors in catalogue.

6. Alternating voltage loading

Allowed alternating voltage loading for single types is limited to frequency 50 to 60 Hz. The sum of applied alternating voltage (amplitude) and direct voltage to the terminals of a capacitor must not exceed category voltage UC. In general mica and plastic foil capacitors are not suitable for connection to network, except special versions of capacitors, which are suitable also for such purposes.

7. Allowed self-heating because of alternating voltage loading

If capacitors are loaded with alternating voltages of higher frequencies with sinusoidal or non-sinusoidal shape of alternating voltage, self-heating and pulse loading is to consider.

Self heating of capacitor ($\Delta\vartheta$) is in operating of capacitor conditioned by belonging power loss (P_i) and outer surface of capacitor (S), and is calculated by the following from:

$$\Delta\vartheta(K) = \frac{P_i (\text{mW})}{S(\text{cm}^2)\beta}$$

where the base for thermoplastic case is used

$$\beta = 1 \left(\frac{\text{mW}}{\text{K} \cdot \text{cm}^2} \right)$$

Power loss of capacitor (P_i) at loading with sinusoidal voltage of higher frequencies is calculated as follows:

$$P_i = U_{\text{ef}}^2 \cdot 2\pi \cdot f \cdot C \cdot \tan\delta(f)$$

where:

C = capacitance in F

U_{ef} = effective voltage in V

f = frequency in Hz

$\tan\delta(f)$ = loss factor at frequency f

P_i = power loss in W

At non-sinusoidal alternating voltage it is to be dismantled according to Fourier's analysis to sinusoidal voltages and calculated the power loss as a sum of single partial sinusoidal power losses. For carrying-out the Fourier's analysis the voltage-time diagram is needed.

The sum of temperatures because of self-heating and temperature of surroundings of capacitor may be equal or lower than permitted category temperature with considering the category voltage UC.

8. Pulse loading

The capacitors charged with non-sinusoidal voltage pulses with quick rise (high du/dt) will be loaded with high current pulses. Because of overloading of internal contacts and connections in capacitor the current must be limited, the boundary current for single types of capacitors depend on:

- amplitude and shape of pulse
- rated voltage of capacitor
- capacitance
- geometrical shape of capacitor.

At the repeating pulses the current loading will be limited by self-heating, surrounding temperature and cooling. The limit of allowed current loading is given with allowed voltage rise in time (du/dt) in V/ μs (volts per microsecond).

$$I_{\text{max}} = C_R \frac{du}{dt}$$

C_R = rated capacitance in μF

du/dt = allowed pulse loading in V/ μs

At single types of capacitors the data of allowed pulse loading is valuable for unlimited number of pulses (charging and discharging of capacitors) up to rated voltage U_R . Minimum resistance in series with capacitor is then:

$$R = \frac{U_R}{C_R \cdot du/dt}$$

where:

U_R = rated voltage of the capacitor in V

C_R = rated capacitance in μF

R = min. series resistance in Ohm

At the pulses of lower voltage than rated voltage the given values of allowed pulse loading are to multiply with the relation factor rated voltage/pulse voltage.

If the demanded pulse loading of the capacitor comply with the requests in certain case, the control is needed to be sure that power loss is not exceeded, resp. self-heating is in area of allowed pulse loading max. 15 °C. In critical cases the capacitor surface temperature is to measure and temperature fall of 5 °C inside capacitor is to consider.

9. Dissipation factor $\tan\delta$

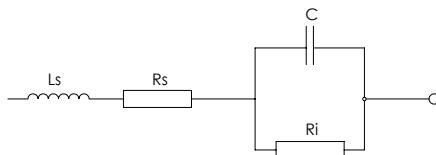

Every capacitor has beside desired capacitance also of her electrical properties, which are shown as constituent elements in following by connection:

L_s - serial inductance

R_s - serial resistance

R_i - insulation resistance (parallel resistance)

C - capacitance

The real capacitor has always incorrectnesses as serial inductance L_s and loss resistance R_s and R_i . The inductance can be reduced but not to zero. At certain frequency f_0 the capacitance and inductance reactance are equal:

$$\frac{1}{\omega_0 C} = \omega_0 L$$

where

$$\omega_0 = 2\pi f_0$$

At frequencies higher than f_0 (the resonant frequency) the inductive component prevail. The resistance R_s is the resistance of the capacitor's wires, transitional resistance of electrode contacting, the resistance of capacitor electrodes and polarization losses in capacitor dielectric. Resistance R_i is insulating resistance depending on insulating properties of dielectric in capacitor.

Values R_s and R_i determine losses in capacitor and depend on temperature, frequency, voltage and capacitance and cause heating of capacitor. The resistance R_i is much bigger then the resistance R_s so we can change both resistances only with equivalent serial resistance of capacitor ESR.

The relation between equivalent serial resistance of capacitor ESR and his reactance $1/\omega C$ is dissipation factor of capacitor and is marked with $\tan\delta$.

$$\tan\delta = ESR \cdot \omega \cdot C$$

The values of dissipation factor ($\tan\delta$) are given at single types of capacitors in catalogue.

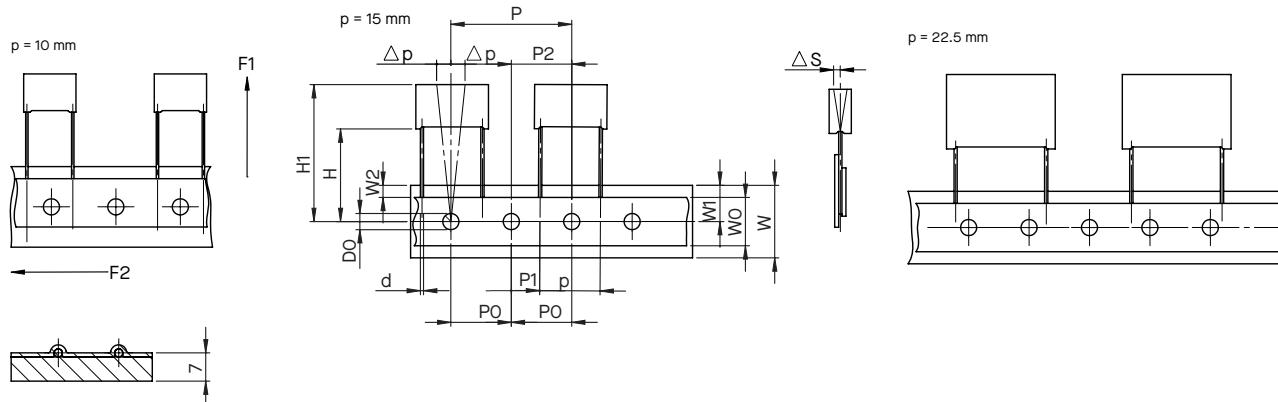

10. Insulation resistance R_i

Insulation resistance of capacitor is given as resistance R_i in $\text{M}\Omega$ or as time constant in seconds: $R_i \cdot C_R = \text{M}\Omega \cdot \mu\text{F}$.

The insulation resistance is the relation between the applied direct voltage and the current, after precise determined time. The limited values for insulation resistance are given for testing time 60 sec. at 20 °C. Test voltages in accordance to rated voltages are as follows:

Rated voltage U_R	Test voltage
< 100 V	10 V
100 V ≤ U_R < 500 V	100 V
≥ 500 V	500 V

METALLIZED POLYESTER CAPACITORS

Type KEU

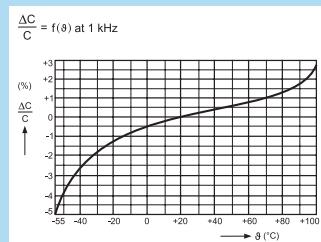

12

As a dielectric high-quality polyester film with good electrical properties is used. Electrodes of capacitor are vacuum metallized aluminium. The thickness of aluminium is approximately $0.01 \mu\text{F}$ to $0.04 \mu\text{F}$, so the capacitor is self-regenerative after break down. The weak point in dielectric because of non-homogeneous material in some microseconds regenerate with energy of current bow of charged capacitor. In this process metallized layer of aluminium in the area of weak point without any damage of dielectric burns out. The weak point is blameless insulated. Therefore, metallized capacitor withstands breakdowns without a permanent short circuit with considering self-healing resp. regeneration.

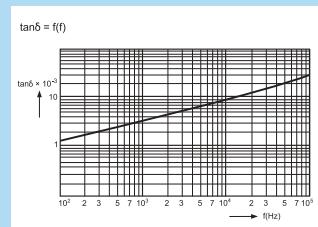

The majority of weak points are cleared during the high voltage burning-out in the manufacturing process. Contact surface is made by spraying the parts of metal contact material. Leads are electrically welded on contact surface. The technology and control system in production assure high liability of capacitors also in use on low voltages and high frequencies. In the case of pulse loading or loading the capacitor with alternative voltage of high gradient of growth is to consider allowed pulse loading du/dt resp. maximal allowed current.

Typical electrical characteristics of metallized polyester capacitors KEU

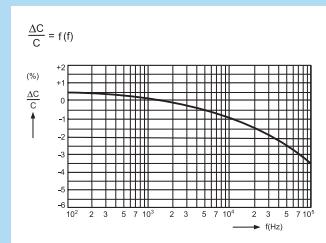

Variation of capacitance as a function of temperature

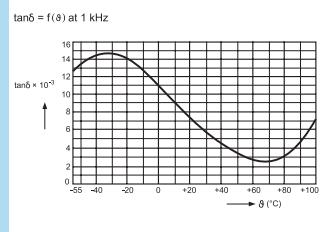

Variation of dissipation factor ($\tan\delta$) as a function of frequency

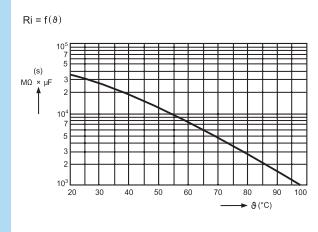

Variation of capacitance as a function of frequency

Variation of dissipation factor ($\tan\delta$) as a function of temperature

Variation of insulation resistance as a function of temperature

Technical data

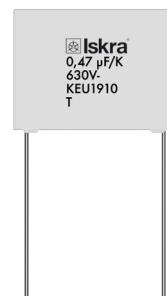

General technical data

Dielectric	polyester (polyethylene terephthalate) film
Electrodes	vacuum metallized aluminium on dielectric
Winding	non-inductive flat shape
Leads	tinned copper wire; standard lengths l1: 4 ^{+0.5} ; 6 ⁻¹ ; 25 ^{±5} . Other lead lengths on request.
Encapsulation	flame-retardant plastic case with flame-retardant epoxy resin seal, UL 94 V-0
Marking	Iskra symbol, capacitance, tolerance, rated voltage
Climatic category	55/100/56 and 55/125/56 IEC 60068-1
Temperature range	- 55 °C to + 100 °C and - 55 °C to + 125 °C
Complies with standards	IEC 60384-2

Electrical data

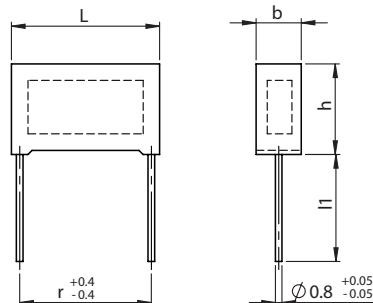

Capacitance range	1000 pF to 22 µF
Standard values of capacitance (C_R)	range E6
Capacitance tolerance	± 20 % (M), ± 10 % (K) and ± 5 % (J) on special request
Rated voltage (U_R)	63 V DC, 100 V DC, 250 V DC, 400 V DC, 630 V DC, 1000 V DC
Allowed alternative voltage up to 60 Hz	40 V AC, 63 V AC, 160 V AC, 200 V AC, 220 V AC, 250 V AC
Category voltage (U_C)	up to + 85 °C $U_C = U_R$; from + 85 °C to + 125 °C voltage U_R is lowered for 1.25 % per 1 °C
Test voltage	1.6 x U_R , 2 s
Dissipation factor ($\tan\delta$)	$\leq 80 \times 10^{-4}$ at 1 kHz and 20 °C
Self inductance	10 nH/cm length of capacitor and leads
Soldering on printed circuit board	temperature of soldering bath 270 °C max., soldering time 5 s max.
Insulation resistance (R_i) at 20 °C	

Rated capacitance C_R (µF)	Min. R_i or $R_i \times C_R$ between terminals	
	$U_R > 100$ V DC	$U_R \leq 100$ V DC
≤ 0.33	30000 MΩ	15000 MΩ
> 0.33	10000 s	5000 s

POLYPROPYLENE CAPACITORS

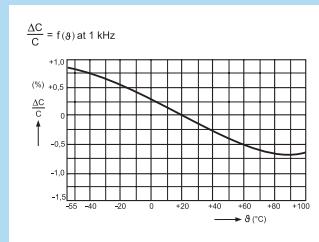

Type KLI

18

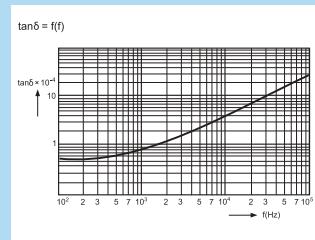

As a dielectric a high-quality polypropylene film with excellent electrical properties is used. The electrodes are of aluminium foil and vacuum evaporated metal on polypropylene film for internal serial connection. Winding is extended foil design and enables contacting of leads on aluminium electrodes for high currents. Capacitors are suitable for operating in pulse circuits (for instance in TV sets in thyristor or transistor deflection steps) where high pulse loading appear.

Typical electrical characteristics of polypropylene polyester capacitors KLI

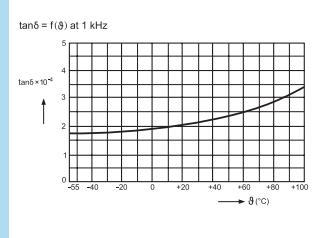

Variation of capacitance as a function of temperature

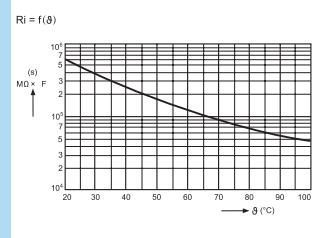

Variation of dissipation factor ($\tan\delta$) as a function of frequency

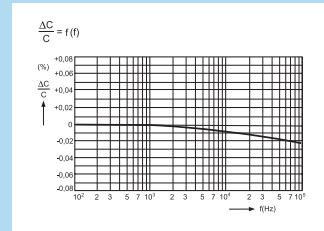

Variation of dissipation factor ($\tan\delta$) as a function of temperature

Variation of insulation resistance as a function of temperature

Variation of capacitance as a function of frequency

POLYPROPYLENE CAPACITORS

KLI1910
radial leads, pitch 10 mm to 27.5 mm

Technical data

General technical data

Dielectric	polypropylene film
Electrodes	metal foil; metal foil and metallized polypropylene film (internal series connection for $U_R \geq 630V$ DC and $r \geq 15$ mm)
Winding	non-inductive construction, flat shape
Leads	tinned copper wire, standard lengths $l_1: 4^{\pm 0.5}, 6^{\pm 1}, 25^{\pm 5}$. Other lead lengths on request.
Encapsulation	flame-retardant plastic case with flame-retardant epoxy resin seal, UL 94 V-0
Marking	Iskra symbol, capacitance, tolerance, rated voltage, type designation
Climatic category	55/100/56 IEC 60068-1
Temperature range	- 55 °C to + 100 °C
Complies with standards	IEC 60384-13; IEC 60384-16

Electrical data

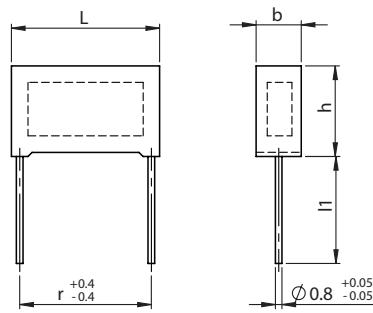

Capacitance range	100 pF to 0.22 µF
Standard values of capacitance (C_R)	range E6 and E12
Capacitance tolerance	± 20 % (M), ± 10 % (K) and ± 5 % (J)
Rated voltage (U_R)	100 V DC, 160 V DC, 250 V DC, 400 V DC, 630 V DC, 1000 V DC, 1600 V DC, 2000 V DC
Allowed alternative voltage up to 60 Hz	63 V AC, 90 V AC, 125 V AC, 160 V AC, 200 V AC (for 630 V DC, $r \leq 10$ mm), 300 V AC, 400 V AC, 500 V AC, 600 V AC
Category voltage (U_C)	up to + 85 °C $U_C = U_R$; from + 85 °C to + 100 °C voltage U_R is lowered for 1.25 % per 1 °C
Test voltage	2 × U_R (for $U_R \leq 630$ V), 2 s; 1.6 × U_R (for $U_R \geq 630$ V and $r \geq 15$ mm), 2 s
Dissipation factor ($\tan\delta$)	$\leq 5 \times 10^{-4}$ at 1 kHz and 20 °C $\leq 6 \times 10^{-4}$ at 10 kHz and 20 °C $\leq 10 \times 10^{-4}$ at 100 kHz and 20 °C for $C_R \leq 0.1 \mu F$.
Soldering on printed circuit board	temperature of soldering bath 270 °C max., soldering time 5 s max.
Insulation resistance (R_i) at 20 °C	≥ 100000 MΩ

METALLIZED POLYPROPYLENE CAPACITORS

Type KNI

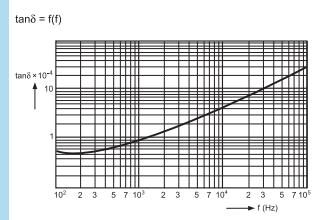

As a dielectric a high-quality polypropylene film of excellent electrical properties is used. Electrodes of capacitors are of double sides vacuum metallized aluminium on polyester film. Winding is cylindrical extended foil design. Such construction enables both very good contacting and the ability to translate higher currents. The capacitor has the property to regenerate after break-down. Capacitors are suitable for use in high pulse loading (for instance in TV sets for "S" correction) because of self-regenerative properties and low loss angle, where common types of metallized capacitors do not comply the requirements.

Typical electrical characteristics of metallized polypropylene capacitors KNI

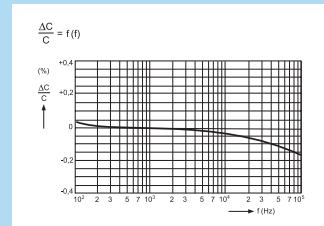

Variation of capacitance as a function of temperature

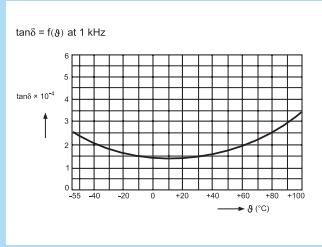

Variation of dissipation factor ($\tan\delta$) as a function of frequency

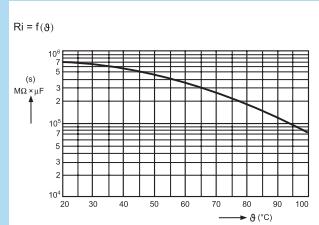

Variation of capacitance as a function of frequency

Variation of dissipation factor ($\tan\delta$) as a function of temperature

Variation of insulation resistance as a function of temperature

METALLIZED POLYPROPYLENE CAPACITORS

KNI1910
radial leads, pitch 10 mm to 27.5 mm

Technical data

General technical data

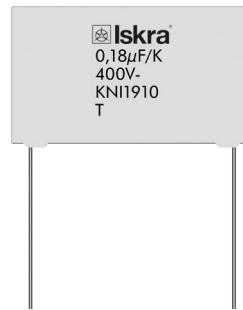

Dielectric	polypropylene film
Electrodes	double-sided metallized polyester film and metallized polypropylene film (internal series connection for $U_R \geq 630V$ DC and $r \geq 15mm$)
Winding	non-inductive construction, flat shape
Leads	tinned copper wire, standard lengths l_i : $4^{\pm 0.5}$; $6^{\pm 1}$; $25^{\pm 5}$. Other lead lengths on request.
Encapsulation	flame-retardant plastic case with flame-retardant epoxy resin seal, UL 94 V-0
Marking	Iskra symbol, capacitance, tolerance, rated voltage, type designation
Climatic category	55/100/56 IEC 60068-1
Temperature range	- 55 °C to + 100 °C
Complies with standards	IEC 60384-16; IEC 60384-17

Electrical data

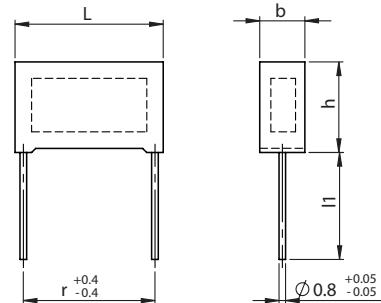

Capacitance range	680 pF to 2.2 µF
Standard values of capacitance (C_R)	range E12
Capacitance tolerance	± 20 % (M), ± 10 % (K) and ± 5 % (J)
Rated voltage (U_R)	250 V DC, 400 V DC, 630 V DC, 1000 V DC, 1600 V DC, 2000 V DC
Allowed alternative voltage up to 60 Hz	180 V AC, 250 V AC, 300 V AC, 400 V AC, 500V AC, 630 V AC, 650 V AC
Category voltage (U_C)	up to + 85 °C $U_C = U_R$; from + 85 °C to + 100 °C voltage U_R is lowered for 1.25 % per 1 °C
Test voltage	$1.6 \times U_R$, 2 s
Dissipation factor ($\tan\delta$)	$\leq 3 \times 10^{-4}$ at 1 kHz and 20 °C, $\leq 6 \times 10^{-4}$ at 10 kHz and 20 °C for $C_R \leq 1 \mu F$ $\leq 15 \times 10^{-4}$ at 100 kHz and 20 °C for $C_R \leq 0.1 \mu F$.
Soldering on printed circuit board	temperature of soldering bath 270 °C max., soldering time 5 s max.
Insulation resistance (R_i) at 20 °C	$\geq 100000 M\Omega$ at 20 °C for $C_R \leq 0.33 \mu F$ $R_i \times C_R \geq 30000$ s at 20 °C for $C_R > 0.33 \mu F$

Pulse loading (du/dt)

U_R (V DC)	Pitch r (mm)			
	10	15	22.5	27.5
	Allowed pulse loading (V/µs)			
250	1100	750	450	300
400	1600	1000	600	500
630	1800	2500	1500	1000
1000	-	3200	2000	1200
1600	-	4500	2500	1800
2000	-	7000	3200	2200

KNI1910
(dimensions in mm)

Diameter of leads

Pitch (mm)	Diameter of leads ϕ (mm)
10	0.6
15; 22.5; 27.5	0.8

Typical application:

Deflection circuits in TV-sets;
protection circuits in SMPS (switch mode power supplies) and in electronic ballast; applications with high voltage and current.

METALLIZED POLYPROPYLENE CAPACITORS

Type KNU, KNC

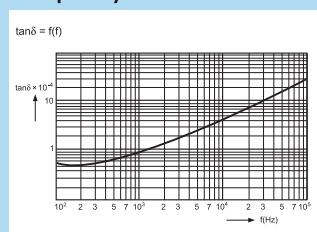

As a dielectric a high-quality polypropylene film of excellent electrical properties is used. Electrodes are of vacuum evaporated metal on dielectric. Leads are electrically welded on contact surface of capacitors. As a result, the possibility for bad contact or even loss of contact during the operation of capacitors is excluded.

Typical electrical characteristics of metallized polypropylene capacitors KNU, KNC

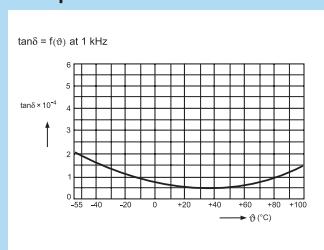

Variation of capacitance as a function of temperature

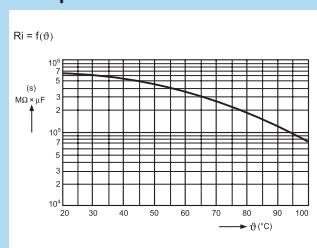

Variation of dissipation factor ($\tan\delta$) as a function of frequency

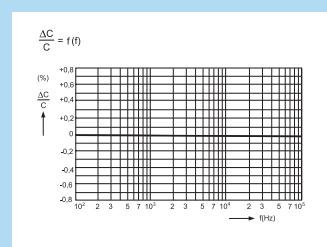

Variation of dissipation factor ($\tan\delta$) as a function of temperature

Variation of insulation resistance as a function of temperature

Variation of capacitance as a function of frequency

METALLIZED POLYPROPYLENE CAPACITORS

KNU1910
radial leads, pitch 10 mm to 27.5 mm

Technical data

General technical data

Dielectric	polypropylene film
Electrodes	vacuum metallized on dielectric
Winding	non-inductive construction, flat shape
Leads	tinned copper wire, standard lengths l_1 : $4^{\pm 0.5}$; 6^{-1} ; $25^{\pm 5}$. Other lead lengths on request.
Encapsulation	flame-retardant plastic case with flame-retardant epoxy resin seal, UL 94 V-0, resistant to wash in halogenated solvents
Marking	Iskra symbol, capacitance, tolerance, rated voltage, type designation
Climatic category	55/100/56 and 55/125/56 IEC 60068-1
Temperature range	- 55 °C to + 100 °C and - 55 °C to + 125 °C
Complies with standards	IEC 60384-16

Electrical data

Capacitance range	1000 pF to 6.8 µF
Standard values of capacitance (C_R)	range E6
Capacitance tolerance	± 20 % (M), ± 10 % (K) and ± 5 % (J) on special request
Temperature coefficient of capacitance (T_C)	appr. $-200 \times 10^{-6} / ^\circ C$
Rated voltage (U_R)	250 V DC, 400 V DC, 630 V DC, 1000 V DC, 1600 V DC
Allowed alternative voltage up to 60 Hz	160 V AC, 220 V AC, 250 V AC, 300 V AC, 500 V AC up to + 85 °C $U_C = U_R$; from + 85 °C to + 125 °C voltage U_R is lowered for 1.35 % per 1 °C
Category voltage (U_C)	
Test voltage	$1.6 \times U_R$, 2 s

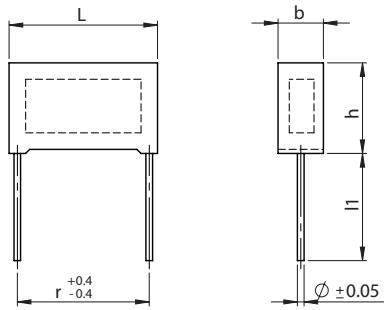

Insulation resistance (R_i) at 20 °C	$\geq 100000 M\Omega$ at 20 °C for $C_R \leq 0.33 \mu F$ $R_i \times C_R \geq 30000$ s at 20 °C for $C_R > 0.33 \mu F$
Self inductance Soldering on printed circuit board	approx. 10 nH/cm length of capacitor and leads temperature of soldering bath 270 °C max., soldering time 5 s max.

Dissipation factor (tan)

f (kHz)	$C_R \leq 0.1 \mu F$	$0.1 \mu F < C_R \leq 1 \mu F$	$C_R > 1 \mu F$
1	$\leq 5 \times 10^{-4}$	$\leq 5 \times 10^{-4}$	$\leq 5 \times 10^{-4}$
10	$\leq 10 \times 10^{-4}$	$\leq 20 \times 10^{-4}$	-
100	$\leq 30 \times 10^{-4}$	-	-
